FACT SHEET

Reporting Period June 2010 – July 2011

Data Sources:

- Documentation provided by 60 Sheriff's Offices and 6 Police Departments representing data compiled from 218 local law enforcement agencies which is approximately 59% of the local law enforcement agencies within 62 (93%) of the state's 67 counties.
- Documentation provided by the Department of Juvenile Justice, Juvenile Justice Information System (JJIS).
- Documentation provided by the Department of Corrections, Bureau of Classification, Security Threat Intelligence Unit.

Gangs

1,637 Number of criminal gangs documented by local law enforcement. This represents a 16.7% increase from the previous year. Increases were documented across the central and southern regions of the state.

Gang Members, Associates, Other Suspects

30,660 Number of gang members and associates documented by local law enforcement agencies [s. 874.03,(3)(a-k), F.S.]. This is a slight decrease (0.4%) from last year.

9,225 Number of other pending suspects documented by local law enforcement agencies. This 36.5% decrease since last year is a result of fewer law enforcement agencies this year providing documentation for this reporting category.

9,537 Number of confirmed Security Threat Group/Gang individuals who are either incarcerated in state prison or released under state supervision. Those incarcerated (8,061) make up 7.8% of the total state prison population (102,319 as of the June 30, 2011 reporting period).

2,790 Number of juveniles under active DJJ supervision who are recognized as gang members, associates, or suspected as gang-affiliated.

52,212 Total number of documented gang members, associates, and other pending suspects. This 7.1% decrease from the 2010 reporting year (56,200) is most likely a result of fewer law enforcement agencies reporting for the current year.

EXECUTIVE SUMMARY

Introduction

The purpose of this report is to establish trend data in order to measure the long-term success of the Florida Gang Reduction Strategy. This report is not intended as a law enforcement threat assessment. However, it is an assessment that provides demographic information about the criminal gangs in our state.

Gangs are not static entities, making it difficult to track them with absolute certainty. Florida's state and local law enforcement agencies continue making strides to verify and catalog the criminal gangs in our state. Not only does this require a commitment of resources within individual agencies, it also requires innovative initiatives across jurisdictions and traditionally practiced silos. Findings in this report should be viewed within the broader context of the aggressive gang control strategies in force around the state. For example, more gang trainings are being offered to law enforcement and criminal justice professionals. There is increasing evidence of more coordination of resources at the local, state, and federal levels to establish multi-agency task forces for responding to criminal gang activities. There are also continuing improvements in mechanisms to document and rapidly exchange gang intelligence information across law enforcement jurisdictions. Law enforcement is working smarter, faster, and with more uniformity across the state.

Methodology

Aggregate information on the number of gangs, gang-affiliated persons, and certain demographics documented by law enforcement in Florida has been compiled and reported through the Office of the Attorney General. For the reporting year July 2010 through June 2011, information was collected from the Department of Corrections, the Department of Juvenile Justice, and single jurisdiction local law enforcement agencies throughout the 67 counties of Florida. In an effort to reach all local law enforcement agencies, a short survey was developed by the Office of the Attorney General and distributed to all 67 Sheriffs' Offices. To avoid duplication of counts, Sheriffs' Offices were requested to coordinate compilation of information for all local law enforcement jurisdictions and county correctional departments in their respective counties. Ninety-two percent (92%) of the 67 Florida

counties are represented in this year's report. Of the approximately 371 Police Departments and Sheriffs' Offices in the state, 218 agencies (59%) participated in this survey effort. Specific criminal gang information is excluded from this report so as not to compromise any on-going criminal investigations.

Results and Implications

Criminal gang violence continues to be a growing problem for the state. Overall, 1,637 gangs were identified by local law enforcement, a 16.7% increase since the 2010 reporting year. Eighty-five percent (85%) of law enforcement survey respondents reported that criminal gang activity either increased or stayed the same in their county. A minimum of 70 national and regionally recognized criminal gang names have been identified in Florida. Fifty-eight percent (58%) of the total documented number of gangs in the state are non-traditional and/or hybrid gangs. These are typically "homegrown" local youth neighborhood gangs that have the very real potential of being subsumed by traditional, well-organized national gangs. Documentation of gang-affiliated persons are categorized into three groups: those who meet the statutory criteria as gang members and as gang associates [s. 874.03(3)(a-k), F.S.], and those who are documented as other or pending suspects. Fifty-nine percent (59%) of the 52,212 persons identified with some level of gang affiliation by law enforcement have been verified as gang members. Twenty percent (20%) have been verified as gang associates, and 21% are documented as other pending suspects. As has been the trend for some time now, gangs are concentrated in central and south Florida, which are the more densely populated regions of the state.

Compared to last year in which all 67 counties were represented, this year's report includes documentation for only 62 counties. Only 59% of local law enforcement agencies' data are represented in this year's results, significantly less than the 72% represented in 2010. In addition, specific documentation for the "other pending suspects" category of gang-affiliated persons was reported at a lower rate this year compared to last year. This may explain, in part, the 27% decrease from 2010 to 2011 in the number of documented "other pending suspects." However, it is interesting to note that although the number of documented gang-affiliated persons is less than in 2010, the number of documented gangs is more than what

was reported in 2010. This seems to indicate that most local law enforcement agencies are paying close attention to the gang problems in their jurisdictions.

Data provided by the Department of Corrections demonstrates a steady increase in the number of confirmed gang members both currently incarcerated and released on state supervised probation (9,537). This reflects the continually increasing number of gang members being convicted and incarcerated, and the continued vigilance by Corrections officials in tracking gangs and verifying gang membership within the state prison system.

In May 2010, the Department of Juvenile Justice enhanced its gang alert data collection process to coincide with Chapter 874 of the Florida Statutes. As a result, the agency is able to provide a much more accurate count of juveniles in its system that are documented as gang members, associates, or suspected of a gang-affiliation. Data provided in 2011 indicates that the agency has identified 2,790 juveniles actively placed in DJJ Diversion, Probation, Commitment, and/or Aftercare, who are considered to be gang-affiliated.

Included in the report this year is data on public middle and high school students' level of gang involvement from the Florida Youth Substance Abuse Survey. The good news to report for public schools is that students' self-reported level of gang involvement has been trending downward since 2008. For 2011, 5.1% of middle and high school students report that they belong to a gang. It is important to note, however, that there exists some measure of prevalence in each county of students who self-report that they have belonged to a gang.

As regular assessments continue, trend patterns will emerge. Regardless, it is imperative that gang control efforts continue to focus on breaking the cycle of criminal gang recruitment and gang-related crime. Reducing the harmful and costly impact of criminal gang behavior within the state of Florida remains the ultimate goal of the Florida Gang Reduction Strategy. Building upon the three pillars of the Strategy, prevention/intervention, suppression/enforcement, and rehabilitation/reentry, gang control initiatives are gaining momentum around the state. Short and long-term success rests upon the progress made in coordinating multiple approaches, implementing best practices, providing training and regular community awareness, and constantly improving the collection and dissemination of gang intelligence information.

Total	10,565	10,878	12,327	13.3% ▲

FLORIDA DEPARTMENT OF JUVENILE JUSTICE

For the reporting year ending June 30, 2011:

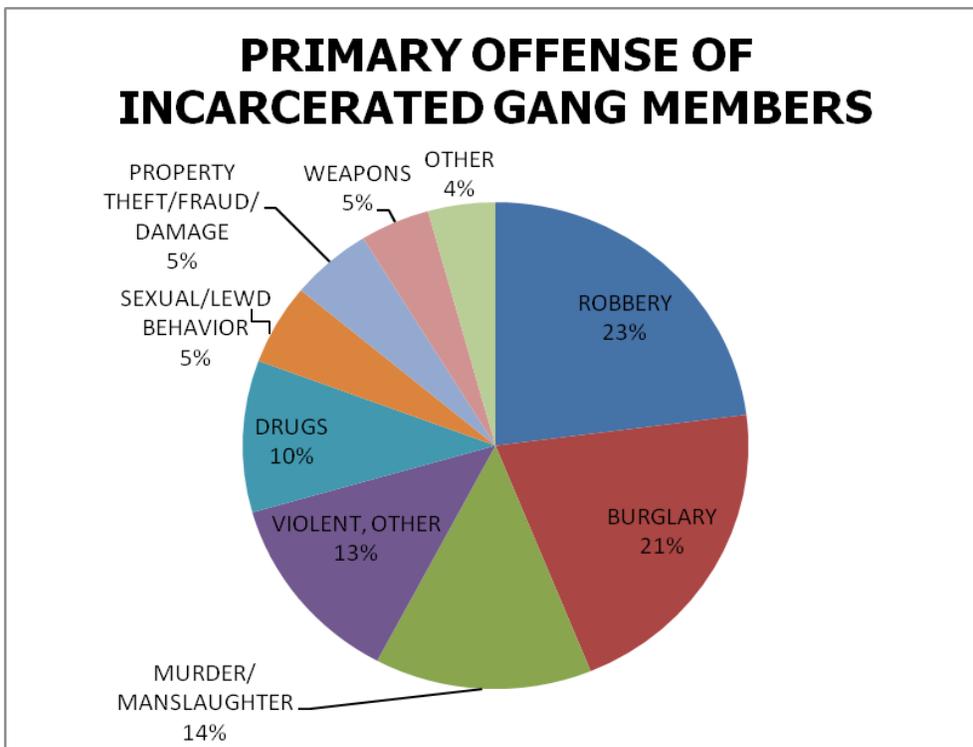

- Total number of referrals to the Juvenile Justice System = 109,813 (some youth referred multiple times)
- Total number of youth referred to the JJ system = 66,934
- Total number of youth who received a DJJ placement = 54,409
- 5.13% of total youth placed have been documented in the Gang Alert Juvenile Justice Information System
- Documentation as gang member and gang associate are certified in writing by law enforcement according to Florida Statute 874.

FLORIDA DEPARTMENT OF CORRECTIONS

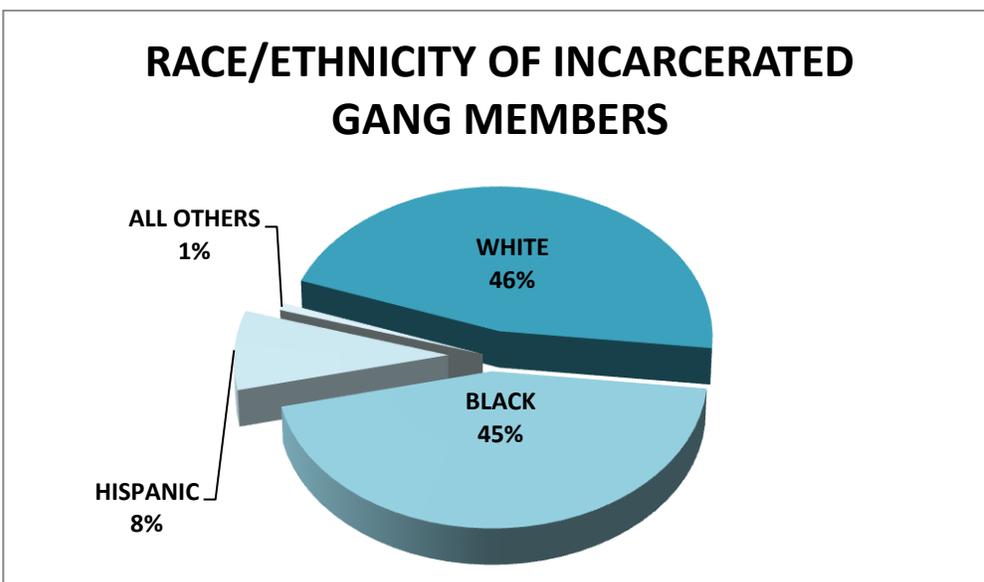

- Department of Corrections, Security Threat Group Intelligence Unit identifies, certifies, and monitors Security Threat Group (STG) activity throughout its prison system. Through this unit, levels of gang activity are identified and monitored within the inmate/offender population.
- By the end of reporting period June 30, 2011 Florida's inmate population reached 102,319; 7.88% of this inmate population has been identified gang members.
- This population of identified gang members comes from all 67 Florida counties as tracked by their county of conviction.

Note: Results reflect 59% of local law enforcement agencies reporting from 62 counties; state totals for gang-affiliated persons include documentation from the Departments of Corrections and Juvenile Justice.

FLORIDA YOUTH PUBLIC SCHOOL SURVEY RESULTS

The **Florida Youth Substance Abuse Survey (FYSAS)** is a collaborative effort among the Florida Departments of Children and Families, Education, Health, and Juvenile Justice. It is based on the “Communities That Care” survey, assessing prevalence of behaviors and attitudes concerning substance use, gang and delinquency, and their related risk and protective factors. This self-report survey has been administered annually to public middle and high school students since the 1999-2000 school year. In odd years, the survey is administered to a statewide sampling of students. In even years, the sample is large enough to generate data applicable to the county level. For more information see <http://www.dcf.state.fl.us/programs/samh/publications/fysas/>.
